Michael E. Rudman, MD | Richard P. Winne Jr., MD

“With our aging yet active population, more people are experiencing chronic pain,” says Dr. Michael Rudman. Drawing on over two decades of research and experience, he and Dr. Richard Winne offer interdisciplinary treatment for acute and chronic pain, often caused by spinal conditions and/or complex regional pain syndrome (RSD). They perform comprehensive evaluations factoring in their patients’ physical, functional, emotional and psychological needs. Both doctors are board certified in anesthesiology and pain management, fellowship trained and multiyear *New Jersey Monthly* Top Doctors. Dr. Rudman is medical director of Morristown Medical Center’s pain management division.

“Primary care doctors know that we practice solid, sound pain medicine,” Dr. Winne says. “They rely on us to relieve their patients’ pain safely and to monitor them closely.” Patients appreciate their willingness to truly listen and

try any strategy—behavioral, pharmacologic or interventional—to achieve optimal outcomes. With recent improvements and advances, spinal cord stimulation systems can now help patients with chronic low back and leg pain. “They have been a great addition to our practice,” says Dr. Rudman. “Approximately 90 percent of our patients who try the new spinal cord stimulators experience an average 80 percent reduction in their pain complaints,” says Dr. Winne.

HOSPITAL AFFILIATIONS: Morristown Medical Center; Franklin Surgical Center, Basking Ridge. **MEDICAL TRAINING:** Dr. Rudman: Pennsylvania State University School of Medicine (MD); University of Pennsylvania Hospital (residency, fellowship). Dr. Winne: UMDNJ (MD); Thomas Jefferson University Medical Center (residency); Medical College of Wisconsin (fellowship).
